CUSTOMIZED LEARNING PORTALS

Secure. Cost-effective. Customized. User-friendly.

A customized learning portal provides you with a secure, easy to manage, cost-effective learning environment that is fully supported and easy to use.

Easily track learning progress
Your portal allows you to quickly monitor learning progress for a single training event or a complete learning history. The reporting feature makes it easy for Managers to understand the status of training within the organization.

Branding
Add your organization's logo and branding to create a familiar learning environment. A simple web-link can provide access to the portal from your organization's intranet.

Manage all your training in one place
You can host PSKN courses, courses you have developed internally, and licensed third-party courses within your portal. Use the system also to share training documents and track registration for in-class learning.

Cost-effective solution
Compared to the cost, time and effort to select, purchase, install and customize an in-house LMS, fees for a PSKN customized portal are nominal. Fees are charged for initial set-up plus an annual user-fee.

Train Portal Administrators within your organization
PSKN is dedicated to providing the training and support you need for managers within your organization to easily oversee and administer training through your portal.

Minimal IT Requirements
PSKN manages all server hardware, software, installation, support and maintenance. We can work closely with your IT department and staff to inform of them of the portal mechanisms.

Communicate only the information you want
Your portal desktops are fully customizable to remove or add functionality. We are continually, updating, upgrading, and improving the LMS and your portal will benefit from these updates.

One stop shop for delivering eLearning & online training
PSKN can offer a range of services to enhance your eLearning and blended learning. We can provide training and technical support, deliver custom development services, and assist in uploading third-party courses.

Get in touch and with us today and we can work with you to find a portal to help you offer value-added training and professional development in an easy to use and efficient way.
